A method that includes the steps of: feeding the strip continuously over a heated support roller (1") with a non-deformable metal surface, applying the polymer composition P to one face Be of the strip bearing on that roller; and heating the strip before, during and after application through contact of the other face Bi with that roller (1"). An associated device for single-face or two-face coating. In the case of application between two rollers, the other roller (2") has a deformable surface. Advantage: improved adhesion of the coating.
